

Tabadul Overview

Tabadul Platform Overview

A regional initiative connecting financial markets to enhance liquidity and enable seamless cross-border trading.

The Tabadul platform was launched as a joint initiative between the Abu Dhabi Securities Exchange (ADX) and the Amman Stock Exchange (ASE). It was established to fulfill a long-term strategic vision of creating interconnected trading platforms across the region.

The initiative aims to strengthen market liquidity and foster sustainable financial growth by linking participating exchanges under a unified trading framework.

As a leading regional initiative, Tabadul seeks to deepen cooperation between markets and drive a significant transformation in liquidity enhancement. It provides investors with a broader range of financial instruments and service packages by streamlining and advancing trading mechanisms.

The platform aspires to expand its reach to include additional Arab and international markets in the future.

Built on a mutual market access model, Tabadul enables investors to trade directly through locally authorized brokers, promoting seamless cross-border investment opportunities.
